## **GeoData Technologies Signs Strategic Partnership with Skyline Software Systems**

*Premier 3D Earth Visualization for Military Applications Available to  
Real Estate Market*

**Sandpoint, ID** – November 7, 2008 – GeoData Technologies (GeoData), the leading provider of 3D collaborative software for the real estate industry, has signed a strategic partnership with Skyline Software Systems (Skyline) that provides GeoData with an exclusive license to use Skyline Globe, Skyline’s 3D earth visualization software in the real estate market. Skyline Globe is known throughout the military and intelligence industry as the leading 3D visualization platform.

“After an extensive analysis of available 3D earth visualization technologies, we chose Skyline Globe for several reasons. Most importantly, their platform is completely flexible and will allow us to be more responsive to the real estate market. Secondly, Skyline Globe has the most robust toolset available, especially their remote communicator functionality. Finally, Skyline Globe provides superior performance due to the way it displays multiple layers of data.

Skyline Globe will remain state-of-the-art due to the demands of the military and intelligence communities,” stated Mark Williams, President of GeoData.

### ***GeoData Technologies Signs Strategic Partnership with Skyline Software Systems continued***

“Skyline has worked with GeoData for the past 18 months and we have been impressed with the traction they have gotten in the real estate market, their technical and real estate expertise and their business plan for leveraging SkylineGlobe into the real estate market. GeoData has licensed our complete SkylineGlobe Enterprise System which gives them the ability to load, enhance and host high resolution aerial imagery, overlay complex data sets and completely customize the user interface,” said Ronnie Yarron, Chief Technology Officer for Skyline.

SiteSeer3D, GeoData’s 3D software integrates the best quality imagery, MLS data including photos and virtual tours, parcels maps, local data sets and Skyline Globe. SiteSeer3D combines property search, analysis and 3D mapping into a powerful and intuitive solution that changes the way that agents interact with their clients. GeoData has recently introduced new data sets and enhanced brokerage branding into its SiteSeer3D technology.

### **About SiteSeer3D™**

SiteSeer3D allows real estate agents and their clients to tour real estate properties virtually. SiteSeer3D provides a true sense of property and the surrounding neighborhood by displaying specific information about a location and its surroundings including parcel size, schools and parks, nearby amenities, topography, traffic analysis and more. SiteSeer3D is an easy-to-use high tech solution that uniquely promotes collaboration and raises the personal interaction between agent and buyer. By providing a comprehensive and integrated source for information and robust visualization of potential properties, SiteSeer3D increases productivity and reduces car expenses and unnecessary travel time.
